

BIOCHEMISTRY AND MOLECULAR MEDICINE

OVERVIEW

The biochemistry and molecular medicine department provides a highly stimulating educative experience, immersing students in the bridging of biochemistry, molecular genetics, bioinformatics and genomics with translational medicine.

Our unique multidisciplinary research program includes expertise in cancer biology, inflammation, metabolic dysfunction, novel therapeutic development, bioinformatics, and computational genomics, unlocking the mysteries of biologic processes at the molecular and genomic level.

Visit the department's website (<https://biochemistry.smhs.gwu.edu/>) for more information.

GRADUATE

Master's program

MS in Bioinformatics and Molecular Biochemistry
