

DOCTOR OF NURSING PRACTICE IN THE FIELD OF PSYCHIATRIC MENTAL HEALTH NURSE PRACTITIONER

The doctor of nursing practice (DNP) in the field of psychiatric mental health nurse practitioner prepares graduates to function as nurses at the highest level of clinical practice, translating knowledge into practice, applying policy, and designing, implementing, and evaluating innovations to improve healthcare systems and patient-centered outcomes. Registered nurses are offered an opportunity to expand their scope of practice to include the care of individuals, families, and groups with psychiatric and mental health needs.

GW's lifespan curriculum is a synthesis of knowledge derived from nursing science, neuroscience, behavioral change theories, motivational theories, learning theories, and other psychotherapeutic frameworks. It is designed to provide a holistic perspective from which to assess, diagnose, treat, manage and evaluate acute and chronic mental illnesses. Students learn about neuropsychopharmacology, interprofessional collaborative practice, crisis intervention, trauma-informed care, health policy, family systems theory, psychotherapy, group therapy, care of vulnerable populations, promotion of mental health and prevention of mental illness, substance use and co-occurring disorders, and other mental illnesses across the lifespan.
